

ANNOUNCING THE AUSTRALIAN LAUNCH OF TZ INFRASTRUCTURE PROTECTION SOLUTIONS

SYDNEY, AUSTRALIA – 1 September, 2010 - TZ Infrastructure Protection Inc., a TZ Limited business, is pleased to announce in conjunction with Anixter Australia Pty Limited, the official Australian launch of the TZ Praetorian™ and TZ Centurion™ Systems at the ASIAL Security 2010 Exhibition and Conference.

TZ's infrastructure protection solutions seamlessly integrate with existing IT applications and networks to provide a cost-effective way to protect and manage physical assets like data center cabinets, industrial enclosures, medical equipment, and retail showcases.

"With the successful launch of our system solutions in North America and in Europe earlier this year, and a solid track record of installations in those markets, we are pleased to make available our range of solutions to the Australian market through Anixter Australia and leverage our global distribution partnership" said Maarten van Duijn, Vice President of TZ Infrastructure Protection Inc.

TZ Praetorian™ is designed to work with existing third party building access control systems to extend physical security and audit trail capability down to the cabinet enclosure level. A single swipe of the same ID card used for building access provides timed authorization to nominated cabinet doors, together with discrete event monitoring and system access reporting. The system is scalable through simple industry standard connections between TZ components and the access control system to manage any number of enclosures. Cabinet door access across multiple cabinets can be readily managed through the multi-cabinet trigger box with integrated status indication for quick security status identification.

TZ Centurion™ is an IP based access control system with both security and environmental sensing capability at the most granular level. The system is specifically designed to meet the most stringent regulatory and industry compliance needs as well as the increasing demand for micro-protection at the physical asset level. Built on an open and scalable software platform, TZ Centurion™ is an extremely cost effective, flexible, retrofitable and easy to implement solution that provides an unprecedented level of integrity, control, auditability and traceability of valuable assets.

"We are very excited to add the TZ Praetorian™ and TZ Centurion™ systems to our data centre solutions range," said Anixter South Pacific Managing Director, Rod Northridge, "These products complement our portfolio offering and allow us to provide our customers truly cost effective, functional and high utility solutions for cabinet-level security."

See a live product demonstration by visiting Anixter's booth at Security2010 - Hall 5, H-24. Security 2010 is Australia's definitive event for Security Professionals, Government Security, IT Security and users of leading edge Security Technology and products. It is being held at the Sydney Convention and Exhibition Centre, 1 - 3 September, 2010.

To order TZ cabinet locking systems, contact your local Anixter representative Australia-wide on 1800 658 890 or in New Zealand on 649 849 280.

About TZ Infrastructure Protection, Inc.

TZ Infrastructure Protection, Inc. is an operating business unit of Telezygology, Inc., the leader in the development of smart system solutions that enable localized locking, sensing, switching, remote actuation and networking of intelligent objects under the control of an open software platform.
