

TZ LIMITED LAUNCHES INFRASTRUCTURE PROTECTION SOLUTIONS THROUGH ANIXTER

MEDIA RELEASE 15th March 2011

TZ Infrastructure Protection Inc., an operating business unit of TZ Limited, has announced today the launch of the company's infrastructure protection solutions to the Australian market through exclusive distribution partner Anixter. The products were unveiled for the first time on Friday to Anixter's key clients, including senior managers and principals from the government, financial, institutional, data centre and system integrator sectors.

TZ Infrastructure Protection, Inc. offers the data centre market extremely affordable and highly scalable micro-security and environmental monitoring solutions at the enterprise level. Built on an open platform, TZ solutions easily integrate with existing applications, networks and protocols and provide a cost-effective way to protect and manage a vast range of physical IT assets at the most granular level.

"Today, meeting the needs for business continuity and regulatory compliance requires a far more proactive approach," says TZ Executive Chairman Mark Bouris. "Critical IT assets are potentially exposed to breach of access, environmental catastrophes and compliance audits. Without control and visibility, businesses could be exposed to great financial risk. The fact is, we must be able to count on our infrastructure, and just controlling physical access is simply not enough."

TZ Infrastructure Protection Inc. provides two solutions, TZ Praetorian™ and TZ Centurion™, to address various business needs. Both systems integrate TZ's intelligence to expand capability and provide enhanced functionality at every stage.

TZ Praetorian™ is designed to work with existing building access control systems to provide electronic security and audit trail capability down to the cabinet or enclosure level.

TZ Centurion™ is a stand-alone and scalable system that delivers micro-security and audit trail capabilities together with additional layers of protection via environmental monitoring, such as temperature, humidity, and leak detection sensors. TZ Centurion™ can also be designed to integrate into existing third party network management systems. The recently released TZ Centurion Server™ software is ideal for customers seeking to remotely access, monitor and control multiple data centre locations from the one interface.

"Our customers have been requesting better security not only at the data centre room level, but also at the individual cabinet level as well," says Tim Martin, Anixter's Managing Director for South Pacific. "The TZ Praetorian™ and TZ Centurion™ not only complement our data centre solutions range, but also offer innovative locking and release solutions that can utilise an existing structured cabling system. We are able to deliver the most cost effective cabinet locking system available today without the complexity associated with the installation of additional cabling."

"The launch of our infrastructure protection solutions with Anixter Australia continues a major co-operative sales and marketing channel initiative with Anixter globally, demonstrable by specific programs in the US market, Canada and more recently in Europe. Our concerted efforts have yielded some very solid wins already with strategic deployments and uptake with customers in the government, financial, IT and corporate sectors," says John Wilson, CEO of TZI, a wholly owned

subsidiary of TZ Limited. “We are looking forward to implementing the same focus and effort in our home base of Australia and to leveraging the many identified opportunities for our micro-protection solutions here in the Asia Pacific region through Anixter’s discerning customer base.”
