

# Hands down the smartest solution for hands off locker management

All around the world we have streamlined processes for customers, employees, residents or students to facilitate safe and secure no contact delivery, collection, storage and more. Our experience is born from years of partnership with well-known Fortune 500 companies to implement customised, scalable solutions engineered in response to their specific needs.

## Intelligent Reservation

With TZ's online locker reservation portal, items can be pre-assigned for delivery to a SMART Locker, eliminating the need for physical contact at the locker bank, other than scanning a barcode.

## Mobile Management

TZ's smart phone management application allows users to interact with a SMART Locker solely through the app, but also provides insightful locker usage data to support a unique user experience.

## Data Rich Administration

Locker management is more than just managing items in and out – it also provides administrators with rich information to enable meaningful workflow, security and optimisation decisions.

## SMART Benefits

### Smart Customisation

Workflow driven solutions customised to the specific needs of every customer. Locker banks can be configured for appropriate social distancing. Mobile apps can manage transactional reporting. Cloud based software can deliver a suite of reports.

### No Touch Access Options

Lockers can be accessed remotely via mobile app, QR code or RFID swipe card – a range of workflows to suit specific workplaces with options to minimise touch or reduce human interaction.

### Inside or Curbside

Indoor, outdoor, metal or laminate – flexible choice from a range of materials including hospital grade, anti-microbial surfaces designed for easy cleaning with common household cleaning agents.

### Seamless Integration

Our SMART locking device technology is designed to work in harmony with your existing systems. We offer seamless integration with third party systems via an extensive API library.

Think SMART. Think TZ.
